

CV OCD-X Programmable MIDI-to-CV Interface

CV OCD-X builds on the **CV.OCD** programmable MIDI-to-CV interface and its companion **Gate Boost** module. With **CV OCD-X** you get four CV outputs (0-8V range) and twelve gate outputs (5,10 or 15V level) on 4mm banana sockets, plus a ground socket. Outputs can be freely assigned to a multitude of MIDI events and controllers using the web-based configuration tool. Find out more at six4pix.com/cvocdx. The diagram below shows the features of your **CV OCD-X**

Each new **CV OCD-X** is configured with the following default mappings from its MIDI input to its CV and gate outputs. You can, of course, change this configuration using the web configurator, which you can find via the web page six4pix.com/cvocdx

Gate 1	Gate 2	Gate 3	Gate 4	Gate 5	Gate 6	Gate 7	Gate 8
Chan 1 Note	Chan 1 Note	Chan 2 Note	Chan 2 Note	Chan 10	Chan 10	Chan 10	Chan 10
Gate	Trig	Gate	Trig	Note C4	Note D4	Note E4	Note F4
CV A	CV B	CV C	CV D	Gate 9	Gate 10	Gate 11	Gate 12
Chan 1 Note	Chan 1 Note	Chan 2 Note	Chan 2 Note	Chan 10	1/4 Note	1/8 Note	1/16 Note
Pitch	Velocity	Pitch	Velocity	Accent	Clock Out	Clock Out	Clock Out
(1.2V/Oct	(5V scaling)	(1.2V/Oct	(5V scaling)	Gate			
scaling)		scaling)					

Thank you for purchasing this product! I hope you find it useful and enjoy using it. You can download the full manual from six4pix.com/cvocdx. Contact me for questions or feedback at jason@six4pix.com

Cheers,
Jason

CV OCD-X is and designed and hand-assembled by Sixty-Four Pixels Ltd in Brighton, UK.
